- Coordinates GPS positioning and tracking on Google Earth

CAVU™: a mobile surveillance solution

videoNEXT offers a mobile application that provides true convenience for the industry's most powerful physical security information and sensor management platform.

CAVU™ features real-time monitoring of cameras and alarms directly from an iPhone, iPad, and iPod Touch. Users significantly decrease response time with the access to the surveillance solution on personalized wireless devices. Partly due to Apple's proven innovative platforms, CAVU is the #1 mobile surveillance application available. With the intuitive features of Apple's products, such as multi-touch interface, GPS, real-time 3D graphics and Wi-Fi connectivity, CAVU is a simple and effective surveillance tool.

Peter Michael, principal engineer for SAIC, says, "videoNEXT's CAVU is the best in the market and is the most feature-rich surveillance application on Apple's iPhone, iPad and iPod Touch. It is intuitive, easy to use, and will provide security professionals with a way to ensure the security of their facilities no matter where they are located. Mobility is critical to most organizations and videoNEXT is a proven leader in mobile video surveillance solutions."

CAVU operates through the Altus, Stratus and Cirrus softwares, which run on Mac OS X. CAVU views multiple surveillance systems in a variety of locations, while also retrieving alarm and event data from archived video. CAVU assures users convenience and innovation geared toward keeping themselves and their assets protected.
