- Extensive user credentials feature

Cirrus™: surveillance management for small businesses and consumers

videoNEXT's Cirrus™ is the first and only full-featured video surveillance offered for Macs as a stand-alone consumer solution.

The innovative Cirrus™ brings video viewing and recording to the hardware of your home or small business. Its convenient compatibility provides the option to be combined with any Axis camera, along with numerous other camera providers. Additionally, Cirrus allows users to access live and archived video via a web browser. videoNEXT's CAVU™ app, a mobile counterpart to Cirrus, adds to the innovative nature of this product by allowing users to manage the security solution with an iPhone, iPod Touch, or iPad.

Cirrus is light enough to run on a Mac Mini, yet it offers the features of the most developed surveillance solutions, such as 3D mapping overlays, customizable interfaces, and built-in motion detection.

The ease of Cirrus, along with its advanced security features, leaves its users feeling secure and protected at all times.
